

GRK BODY DEVELOPMENT TAKES THE NEXT STEP

3D Scanning Legendary Custom & Tuner Vehicles GRK Development Moves to the Next Phase!

The GRK development team has carried out 3D scanning of dress-up and tuning vehicles in collaboration with VeilSide (headquartered in Ibaraki), RE Amemiya (headquartered in Chiba), T&E (headquartered in Shizuoka), and CARAPP (headquartered in Tochigi), with the goal of acquiring foundational data for future body development. By capturing highly precise data down to the finest details directly from the actual vehicles, it becomes possible to achieve a more faithful reproduction – from the subtle flow of curved surfaces to the texture of every intricate detail. This initiative represents a significant step forward in our pursuit of even greater product quality. Development will now advance using the acquired data, with a new body lineup planned for a rolling release. Stay tuned for new products that push the boundaries of true-to-life sculptural design.
